KAWAUCHI, Akio's Manuscript List

119. (with A. Shimizu) On the orientations of monotone knot diagrams.
118. (with J. Kim) Immersed 2-knots with essential singularity.
115. Cross-index of a graph.
114. Splitting criteria for a definite 4-manifold with infinite cyclic fundamental group.
112. On a cross-section of an immersed sphere-link in 4-space, Topology and its Applications (to appear).
110. (with I. Tayama) Representing 3-manifolds in the complex number plane, Topology and its Applications (to appear).
103. On 4-dimensional universe for every 3-dimensional manifold, Topology and its Applications, 196 (2015), 575-593. DOI:10.1016/j.topol.2015.05.035.
85 (with I. Tayama). Enumerating 3-manifolds with lengths up to 9 by a canonical order, Topology Appl. 157 (2010), 261-268.
83. Applying knot theory to sciences - mainly on knot models of a prion protein and a psychological mind (in Japanese), a civic lecture record, Sugaku Tushin, 14-4 (February, 2010), 26-45.
81. (with I. Tayama) Enumerating homology spheres with lengths up to 10 by a canonical order, Proceedings of Intelligence of Low-Dimensional Topology 2009 in honor of Professor Kunio Murasugi's 80th birthday, (2009), 83-92.
77. Rational-slice knots via strongly negative-amphicheiral knots, Communications in Mathematical Research 25(2009), 177-192.
68. Characterizing the first Alexander Z[Z]-modules of surface-links and of virtual links, in:

64. A tabulation of 3-manifolds via Dehn surgery, Boletin de la Sociedad Matematica Mexicana (3) 10 (2004), 279-304.

58. From linear algebra to homology (a monograph in Japanese), Baifukan Tokyo (2000).

52. Osaka City University Internet Lectures on knot theory (in Japanese, 1997).

47. Mutative hyperbolic homology 3-spheres with the same Floer homology, Geometriae Dedicata 61(1996), 205-217.
43. On coefficient polynomials of the skein polynomial of an oriented link, Kobe J. Math. 11(1994), 49-68.
42. Splitting a 4-manifold with infinite cyclic fundamental group, Osaka J. Math. 31(1994), 489-495.
30. Three dualities on the integral homology of infinite cyclic coverings of manifolds, Osaka J.
16. The (2,1)-cable of the figure eight knot is rationally slice (in a handwritten manuscript) (1980).
